

**SRA OSS Inc. launches OpenWeb – an Open Source / Eclipse based platform  
for application development and deployment**

SRA OSS a wholly owned subsidiary of SRA Inc. (Japan), a global, publicly held (stock symbol 9714) software services and products company from Japan is pleased to launch **OpenWeb** platform, an integrated development / deployment platform based on Eclipse using Open Source technologies. OpenWeb platform uses a combination of various matured and robust open source software components backed by SRAs proprietary software providing a low-cost and ready-to-use environment for application development and deployment. OpenWeb provides organizations a low cost and ready-to use environment for application development and deployment

SRA OSS Inc. is a wholly owned subsidiary of SRA Inc. (Japan), a global, publicly held Japanese software services and products company dedicated primarily to Open Source and Linux technologies. SRA offers end-to-end Open Source solutions to include both services and products. The open source products are the newly launched **OpenWeb** an Open Source / Eclipse based platform for application development and deployment and (**Powergres**) the popular Open Source database with high availability (HA) features. The OpenWeb product is an enterprise level, cost effective product with robust features based around Eclipse using Open Source components and plug-ins. The core product is free and can be downloaded from the SRA OSS site. The premium version of the product, which has add-on features, as well as maintenance and support would be through paid subscriptions. Says Dr. Rao, President of SRA OSS Inc. "OpenWeb is a robust, cost effective, lightweight product offering strong functionality and capabilities for application development and deployment the enterprise" .
